DETAILED ACTION

Allowable Subject Matter

Claim 3-15 are allowed.

The primary reason for the allowance of claims 3-11 is the inclusion of the method step of synchronously executing said position data request signal in said plurality of position measuring instruments, wherein said synchronously executing comprises'. taking into account a specific delay correction value for each position measuring instrument, so that from a time said position data request signal is generated by said processing unit until said synchronously executing said position data request signal in said position measuring instruments, an identical delay time results in each of said position measuring instruments. It is these steps found in each of the claims, as it is claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes these claims allowable over the prior art.

The primary reason for the allowance of claims 12-15 is the inclusion of the limitations of an a plurality of position measuring instruments, which are connected to one another in a linear bus topology, wherein, for synchronous execution of a position data request signal sent by said processing unit, said plurality of position measuring instruments each include correction devices that take into account specific delay correction values, so that from a time said position data request signal is generated by said processing unit until synchronous execution of said position data request signal in all said plurality of position measuring instruments, an identical delay time results for each of said plurality of position measuring instruments. It is these limitations found in
